Circular. 25/2022/PHQ

Sub : FSL Examination-DNA profiling in all murder/unnatural death/rape cases-
instruction-reg

Ref : Letter No.D6/17379/2021/CB of ADGP CB dtd 3/11/2022

While conducting medical test of injured /victims in sexual offence related cases and at the time of autopsy of dead bodies some shortcomings are noticed recently. If foreign biological particles are detected during Autopsy or in crime scene examination or at the time of medical examination of victims, the investigation officers are not forwarding it for DNA profiling at once or not making discussions with scientific officers about the possibility of conducting DNA examination which result in valuable evidence lost forever. When DNA profiling is required at a later stage, the sample seems either insufficient in quantity or becomes drained out. This is adversely affecting the investigation of undetected cases in which the accused is suspected later.

Hence, all the investigating officers are hereby directed to ensure that in all murder/unnatural death/sexual offence cases, if foreign biological particles are detected, request for DNA profiling should be initiated in the initial stage itself and when the articles are send for analysis, a letter should also be submitted to the scientific officer for preserving sample for performing DNA profiling.
